

Clean Stream

Respect The Source

Campaigns Field

Clean Stream guard the drinking water supply tap, ensuring an hygienic potable water point, with the collected overspill water from bottle re-filling used to supply efficient hand wash points.

Hand wash is separate to clean water collection. Hand wash waste water is collected and drained remotely. Only pure vegetable soaps are used.

We are proposing to run the tap at the top of the hill as a drinking water point, with a twin TipTap set between the tap and the toilets.

There will be water signage.

We need four volunteers to run the systems and who will engage with the gatherers about clean water collection and water saving.

We will run a daily TipTap Making Workshop.
